Treatment of Personality Disorders Oct 27 2019 It has been almost twenty years since DSM-III created a major shift in psychiatric classification procedures and in diagnostic and treatment practice by introducing the multi-axial system and, for our patients specifically, the Axis II: Personality Disorders. Researchers and clinicians were forced to focus on many issues related to the field of personality and its disorders. This meant an immense impetus for research, both empirical and theoretical. Many recent developments are described in this book, as reviews or as original articles. This book also covers developments in Europe as well as in North America. Important questions still remain unanswered, such as: What is the relationship between the different clusters: A, B, & C? Are we talking about dimensions, categories, or typologies? What can be done for patients who have more than one personality disorder? Is a prototypical approach required? Consequently, is a multiconceptual approach in treatment and research required? The authors contribute to this discussion and provide guidelines for further thinking in research and treatment planning. For clinicians, it is of major importance to know whether the disorder can be influenced by treatment, and whether permanent change is really possible. A very important question is whether a person indeed has a personality disorder, and how

this diagnosis affects clinical practice.

There were many books illustrating specialized or applied aspects of the psychology of personality - such as abnormal psychology, educational psychology, child psychology, mental measurement, vocational guidance, etc. - but lacking was a treatment of personality study as pure psychology, concentrating on the fundamentals. The aim of this title was therefore to bring the general problems of personality description and development, normal and abnormal, into a single perspective and to integrate the principle fields of observation in clear cut generalizations.

What is the best personality to have; a bold one or a shy one, an aggressive one or a meek one? And are you stuck with your personality, or can you change it? Daniel Nettle takes the reader on a tour through the science of human personality, introducing the five 'dimensions' on which every personality is based, and using an unusual combination of individual life stories and scientific research. Showing how our personalities stem from our biological makeup, Nettle looks at the latest findings from genetics and brain science, considers the evolutionary origins and consequences of personality variation, and even includes a questionnaire for you to assess your own personality against the five dimensions.
