Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever. Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago You can save \$2,000 by cutting freight fees and "administrative" charges Diesel annual urea fill-up scams can cost you \$300, including an \$80 "handling" charge for \$25 worth of urea Lemon-Aid's 2011-12 Endangered Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki In two comprehensive volumes, Commercial Contracts: Strategies for Drafting and Negotiating, Second Edition presents the insights and guidance of over 30 leading specialists, all experts in their fields. The essays represent 16 of the leading presentations from the two most recent proceedings of the annual Cooperstown Symposium on Baseball and American Culture, held on June 1-4, 2011, and May 30-June 1, 2012. The essays are divided into six parts. "Baseball History, Myth, and the American Past" considers the distinction between reality and remembrance. "Decade of Transition: The 1960s in Baseball and America" explores a critical passage in the evolution of the nation and the game. "Baseball Economics: Owners, Profits, and the Public" provides perspectives on sports as business. "Out of the Bleachers: Women Umpiring and Playing" links the game to those who participate and care about it despite the expectations of atavistic gender roles. "Casting the Game: Stage and Screen" examines theatrical and cinematic treatments of baseball. Part 6, "Game of Numbers: Statistical Baseball," examines the sport and its artifacts quantitatively. Over the past decade India has witnessed a number of land wars that have centred crucially on the often forcible transfer of land from small farmers or indigenous groups to private companies. Among these, the land war that erupted in Singur, West Bengal, in 2006, went on to make national headlines and become paradigmatic of many of the challenges and social conflicts that arise when a state-led policy of swiftly transferring land to private sector companies encounters resistance on the ground. Land Dispossession and Everyday Politics in Rural Eastern India analyses the movement by Singur's so-called unwilling farmers to retain and reclaim their farmland. By foregrounding the everyday politics of popular mobilization, the book sheds new light on the movement's internal politics as well as on contentious issues rooted in everyday caste, class and gender relations. This volume shows how, since 1950, the growth of copyright regulation has followed, and enabled, the extraordinary economic growth of the entertainment, broadcasting, software and communications industries. It reproduces articles written by an extensive list of leading thinkers. US scholars represented in readings include James Boyle, Lawrence Lessig, Pamela Samuelson, Mark Lemley, Alfred Yen, Julie Cohen, Peter Jaszi and Eben Moglen. Leading non-US contributors include Alan Story, Brian Fitzgerald and Peter Drahos. These and other authors explain copyright origins, the development of the law, the theory of enclosure, international trends, recent developments, and current and future directions. Today, the copyright system is often portrayed as an engine of growth, and effective regulation as a predictor of economic development. However, critics see dangers in the expansion of intellectual property rights. The articles in this volume focus principally on the digital age, examining how copyright regulation is likely to affect goals of dissemination and access. like no other car-and-truck book on the market. "Dr. Phil," along with George Iny and the Editors of the Automobile Protection Association, pull no punches. This book, which contains a collection of review articles as well as focus on evidence-based policy making, will serve as a valuable resource not just for all postgraduate students conducting research using systems analysis thinking but also for policy makers. To our knowledge, a book of this nature which also has a strong African focus is currently not available. The book examines environmental and socio-economic risks with the aim of providing an analytical foundation for the management and governance of natural resources, disasters, addressing climate change, and easing the technological and ecological transitions to sustainability. It provides scientific and strategic analysis to better understand the dynamics of future energy transitions, their main driving forces, enabling factors, barriers, as well as their consequences for the social, economic and environmental dimensions of human wellbeing. Science-based policy advice is achieved through an integrated assessment and modeling of how to simultaneously address the major energy policy challenges in the areas of environment (climate change and air pollution), energy poverty (or access to affordable and clean energy for the poor), energy security and reliability. It also aims to improve our understanding of ecosystems and their management in today's changing world—in particular, the current state of ecosystems, and their ecological thresholds and buffering capacities. It provides support for policy makers in developing rational, realistic and science-based regional, national and global strategies for the production of fuel, food and fibre that sustain ecosystem services and safeguard food security. Finally, it addresses the human development dimension of global change based on comprehensive studies on the changing size and composition of human populations around the world by analyzing both their impacts and the differential vulnerabilities by age, gender and level of education. Reliable information on how health service strategies affect the poor is in short supply. In an attempt to redress the imbalance, 'Improving Health Service Delivery in Developing Countries' presents evidence on strategies for strengthening health service delivery, based on systematic reviews of the literature, quantitative and qualitative analyses of existing data, and seven country case studies. The authors also explore how changes in coverage of different health services affect each other on the national level. Finally, the authors explain why setting international targets for health services has been not been successful and offer an alternative approach based on a specific country's experience. The book's findings are clear and hopeful: There are many ways to improve health services. Measuring change and using information to guide decisions and inform stakeholders are critically important for successful implementation. Asking difficult questions, using information intelligently, and involving key stakeholders and institutions are central to the "learning and doing" practices that underlie successful health service delivery. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An
