Nursing Concept Analysis Sep 30 2022 The only text to feature examples of 30 key concept analyses supporting nursing research and practice This DNP and PhD doctoral-level nursing text delivers analyses of 30 core concepts that define nursing theory, research, education, and professional practice. Grounded in the concept analysis framework developed by Walker and Avant, the book clearly demonstrates how concepts are used to build theory, support research, and improve education and professional practice. Designed to facilitate practical applications of concept analysis methodology, all chapters provide an explicit description of each concept and a consistent framework for its analysis. Additionally, a diagrammatic representation of characteristics across concepts allows readers to make comparisons and ultimately to build on the text's knowledge base. Expert authors from clinical and research disciplines focus on the core of nursing-- the nurse-patient relationship--grouping concepts into the categories of patient/client-focused concepts, career-focused concepts, and organizational/systems-focused concepts. Within these groups the book addresses such contemporary themes as hope, postpartum depression, resilience, self-care, cultural competence, and many others. With its expansive descriptions and analyses of key nursing concepts within a consistent framework, the book will help nurse scholars to develop a sophisticated analytic ability and provide graduate nursing students with a foundation for developing a DNP capstone or PhD research project. Key Features: Offers in-depth description and analyses of 30 core concepts relevant to nursing and related disciplines Provides a consistent analytic framework throughout Demonstrates a highly practical application of concept analysis methodology Includes diagrams of characteristics across concepts for comparison Authored by renowned scholars and practitioners

Philosophy of Science for Nursing Practice, Second Edition Feb 21 2022 Written for DNP and PhD nursing programs, this text, based on a unique team-taught philosophy of science nursing courses, distills challenging content and delivers it in clear, highly accessible language for professors untrained in philosophy and their students. Authored by a nurse researcher/philosopher team who developed and taught this course for more than 7 years, the book provides a unique, integrated viewpoint that avoids esoteric and overly theoretical discussions and facilitates a clear connection between the philosophy of science and nursing science and practice. This second edition offers enhanced clarity and encompasses updates in philosophy of science interpretation, nursing practice and science, and a still-emerging practice epistemology. It is distinguished by its increased emphasis on DNP investigation that relies on a fundamental relationship with evidence-based practice, as well as the informational needs of the PhD student and the type of research the PhD graduate is expected to produce. The bulk of the text focuses on basic principles and concepts of the philosophy of science in regard to the education of both DNP and PhD nursing students. The book discusses the concept of nursing as a “practice discipline” within historical and sociological contexts, and addresses the importance of philosophy of science knowledge within a practice discipline. It examines the controversial question of how much philosophy of science a doctoral student actually needs. The text concludes with a brief introduction to nursing science knowledge content that is an essential “bridge” to the philosophy of science content and serves as a “next step” toward building a nursing epistemology. New to the Second Edition: Revised to enhance clarity of information Reflects contemporary trends in doctoral nursing education Updated Questions for Reflection offer scholarly discourse New appendix offers a sample semester-based syllabus based on the second edition Key Features: Provides concise, accessible information that makes clear connections to practical applications Written jointly by a philosopher and a nurse scholar who co-teach the course Facilitates student ability to see the real connection between philosophy and practice Increased focused content on how philosophy of science content is essential to understand evidence-based and practice-based evidence

Application of Nursing Informatics Aug 30 2022 Designed to provide a foundation for nursing informatics knowledge and skills required in today's data-driven healthcare environment, this text examines the impact and implementation of technology in

nursing practice. Patient healthcare needs have only become more complex in a rapidly aging and diversifying population. Nurse Informaticists, as experts in improving healthcare delivery through data and technology, play a key role in ensuring quality and safety to patients. This text relies on nurses' practical experience to foster higher-level critical thinking and decision-making for professional development in informatics and life-long learning. Application of Informatics and Technology in Nursing Practice addresses the foundations of Nursing Informatics competencies, streamlined for the unique experience of practicing nurses. Organized around the framework of AACN Essentials of Baccalaureate Education, ANA Scope and Standards of Practice for Nursing Informatics, Institute of Medicine (IOM) Competencies, and Quality and Safety Education for Nurses (QSEN) knowledge, skills, and attitudes (KSAs), this text features numerous case scenarios of real-life applications to engage the reader and reinforce content. Chapters cover informatics competencies, knowledge, and skills in a concise manner that recognizes the value of prior nursing experience and builds upon the reader's existing knowledge-base. Key Features Provides information needed for all nurses in order to advance professionally in the new discipline and specialty of Nursing Informatics. Each chapter contains relevant critical thinking exercises, vignettes, and case studies Provides information and skills needed by nurses specific to a variety of healthcare settings Each chapter contains end-of-Chapter Learning Assessments: What Do You Know Now? Improving Exit Exam Scores Jan 11 2021 "A growing trend in nursing education is to administer a comprehensive assessment (exit) examination prior to graduation to predict success on the National Council Licensure Examination for Registered Nurses (NCLEX-RN). To improve exit examination scores of senior nursing students in an associate degree curriculum, a structured faculty directed remediation program was implemented. Four 1 hour sessions were presented over a 2 week period about three weeks prior to the exit examination. Each session included evidence-based strategies that addressed objectives of strengthening the knowledge base, controlling anxiety and improving self-care, enhancing test-taking skills, and completing practice NCLEX-RN questions. The mean exit examination score for the class of students receiving remediation was 1203 as compared with the mean score of 790 for a previous class not receiving remediation. The findings supported the evidence that a faculty directed remediation program does improve exit examination scores. In nursing education, the improved scores have the potential to benefit the individual students, the reputation of the college, and the nursing program quality. In the practice of nursing, improved scores can address the nursing shortage and improve the nation's health by placing more graduate nurses into the health care arena in a timely manner. Underlying all these benefits is the pervasive goal of promoting safe and effective patient care outcomes." -- Abstract.

Outcomes and Competencies for Graduates of Practical/Vocational, Diploma, Associate Degree, Baccalaureate, Master's, Practice Doctorate, and Research Doctorate Programs in Nursing Nov 08 2020 Outcomes and Competencies for Graduates of Practical/Vocational, Diploma, Associate Degree, Baccalaureate, Master's. Practice Doctorate, and Research Doctorate Programs in Nursing, is a first-of-its-kind report by the NLN Education Competency Work Group, which collaborated over a

two-year period to evaluate how best to prepare graduates of nursing programs across the academic spectrum to function in an evolving, dynamic health care environment. This document lays the foundation for ensuring that all United States nursing programs can expand and develop while maintaining the highest standards of quality and excellence. Nurse educators examined program outcomes and competencies across all types of programs -- rather than looking at each program type in isolation from others, as has been the case. Such a wide-ranging, inclusive approach serves to clarify concepts that cut across all program types while clarifying the unique focus of each program type in relation to each concept. The group from education and practice, therefore, reviewed existing literature, work previously completed by NLN advisory councils and task groups, and emerging national concerns and initiatives to formulate outcomes and competencies. They vetted these with the nursing education community and finalized a set of outcomes and competencies that address all program types. The result is a comprehensive document that is both contemporary and futuristic and fills a gap in the existing body of scholarly research. It helps nurse educators to build curricula, further the science of nursing education, and explore and refine teaching, learning and evaluation.

Philosophy of Science for Nursing Practice May 27 2022 Named a 2013 Doody's Core Title! "A challenge ahead for nursing is to take the path of most resistance rather than the easier road of least resistance. The debate needs to continue...[by focusing on] whether nursing is teaching an appropriate level of inquiry including philosophy and methodologies specific to those real-

world, rapidly changing conditions that characterize today's practice environment." From the Foreword by Sally J. Reel, PhD, RN, FNP, BC, FAAN, FAANP University of Arizona College of Nursing "I have taught a philosophy of science course intermittently for about 20 years. Philosophy of Science for Nursing Practice is not only the most succinct, insightful, well-organized presentation of information I've yet seen, but drives thinking to where it ought to be." Laura Cox Dzurec, PhD, PMHCNS-BC Dean and Professor Kent State University College of Nursing "This appears to be the first book that focuses on the philosophy of science and its application to practice doctorates. The authors assume readers may not have a formal background in the philosophy of science, and write in a conversational tone with a minimum of difficult terminology. They discuss the current state of DNP education in a way that can foster discourse and debate." Score: 97, 5 Stars. --Doody's Medical Reviews Tailored for both DNP and PhD doctoral nursing programs, this text is the first to focus on philosophy of science applications to the discipline of nursing. The authors, a philosopher and a nurse-scholar who co-teach the course upon which this volume is based, address a growing need for increased philosophy of science content in evolving DNP programs, as well as practice-oriented research considerations for this discipline. The volume presents a creative use of the social, political, and historical content in which nursing has evolved. As a whole, this extremely important text reassures the student of the fluid and palpable connections between philosophy of science and nursing science and practice. Key Features: Explores the concept of nursing as a practice profession and assesses how much philosophy of science is needed for doctoral nursing students. Examines the practical application of the philosophy of science to both DNP and PhD students. Addresses the basic principles and concepts of the philosophy of science and their practical application for contemporary practice inquiry. Provides an overview of the century-long path to the development of nursing science that is an essential "bridge" to the philosophy of science content and serves as a "next step" towards building a nursing epistemology Reinforces important connections between the philosophy of science to nursing science and nursing practice.

The Future of Nursing Nov 01 2022 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single

largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
