Manuals Combined: AMPHIBIOUS WARFARE & NAVAL SCIENCE FOR THE

MERCHANT MARINE OFFICER Jan 29 2020 AMPHIBIOUS WARFARE LETTER OF

PROMULGATION This curriculum guide builds upon the work of many contributors.

Intellectual rigor and academic standards demand that the full scope of amphibious warfare be encompassed rather than the tracing of Marine Corps History emphasizing the landings of the Great Pacific War which had forged our modern Corps. The present course structure and content reflect the determination that (1) the history of amphibious warfare remains a valid intellectual endeavor; (2) its scope greatly exceeds the study of the U.S. Marine Corps; and (3) a historical survey of amphibious warfare is best approached from a "Maneuver Warfare" perspective, exploring the various levels of war and their impact on each battle. The levels of war would include the political, strategic, operational, and tactical/technical. This construct of classes will also prepare students to become critical thinkers of warfare, and thus better prepare them for future commissioned service to the Marine Corps. Instructors are cautioned to observe that this manual contains lesson guides, not lesson plans. Instructors must devote time for serious background reading in recommended literature, course texts, and contemplation of a conceptual approach that will capture the imagination of their students. Another important objective of this course must be to stimulate original thought and persistent interest on the part of the student. PROFESSIONAL CORE COMPETENCY OBJECTIVES The primary objectives of this course are to provide prospective merchant marine officers a basic understanding of their role in our national security and to familiarize them with the basic principles and procedures for operating a merchant ship as a naval or military auxiliary in a wartime convoy or independent sailing situation.

Guidelines for Reporting Health Research Mar 13 2021 Guidelines for Reporting Health Research is a practical guide to choosing and correctly applying the appropriate guidelines when reporting health research to ensure clear, transparent, and useful reports. This new title begins with an introduction to reporting guidelines and an overview of the importance of transparent reporting, the characteristics of good guidelines, and how to use reporting guidelines effectively in reporting health research. This hands-on manual also describes over a dozen internationally recognised published guidelines such as CONSORT, STROBE, PRISMA and STARD in a clear and easy to understand format. It aims to help researchers choose and use the correct guidelines for reporting their research, and to produce more completely and transparently reported papers which will help to ensure reports are more useful and are not misleading. Written by the authors of health research reporting guidelines, in association with the EQUATOR (Enhancing the QUALity and Transparency Of health Research) Network, Guidelines for Reporting Health Research is a helpful guide to producing publishable research. It will be a valuable resource for researchers in their role as authors and also an important reference for editors and peer reviewers.
