Impulsivity, to varying degrees, is what underlies human behavior and decision-making processes. As such, a thorough examination of impulsivity allows us to better understand modes of normal behavior and action as well as a range of related psychopathological disorders, including kleptomania, pyromania, trichotillomania, intermittent explosive disorder, and pathological gambling -- disorders grouped under the term "impulse control disorders" (ISDs). Recent efforts in the areas of cognitive psychology, neurobiology, and genetics have provided a greater understanding of these behaviors and given way to improved treatment options. The Oxford Handbook of Impulse Control Disorders provides researchers and clinicians with a clear understanding of the developmental, biological, and phenomenological features of a range of ICDs, as well as detailed approaches to their assessment and treatment . Bringing together founding ICD researchers and leading experts from psychology and psychiatry, this volume reviews the biological underpinnings of impulsivity and the conceptual challenges facing clinicians as they treat individuals with ICDs. It is an authoritative resource for clinical professionals, researchers, and students who work in this expanding area. Golf Hatchback & Estate and Bora Saloon, including special/limited editions. The Handbook on Risk and Need Assessment: Theory and Practice covers risk assessments for individuals being considered for parole or probation. Evidence-based approaches to such decisions help take the emotion and politics out of community corrections. As the United States begins to back away from ineffective, expensive policies of mass incarceration, this handbook will provide the resources needed to help ensure both public safety and the effective rehabilitation of offenders. The ASC Division on Corrections & Sentencing Handbook Series will publish volumes on topics ranging from violence risk assessment to specialty courts for drug users, veterans, or the mentally ill. Each thematic volume focuses on a single topical issue that intersects with corrections and sentencing research. NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available. The Agricultural Trade Policy Simulation Model (ATPSM) is designed of detailed analysis of agricultural policy issues. It can be used as a tool by researchers and negotiators alike for quantifying the economic effects at the global and regional level of recent changes in national trade policies. The Model covers 161 countries and 35 agricultural commodities, and includes an extensive database. The Model also provides estimates of changes in trade volumes, prices, government revenues and welfare indicators linked to changes in the general trade policy environment. The Model can be downloaded free from the UNCTAD website at <http://www.unctad.org/tab/>. For more than a century, original music has been composed for the cinema. From the early days when live music accompanied silent films to the present in which a composer can draw upon a full orchestra or a lone synthesizer to embody a composition, music has been an integral element of most films. By the late 1930s, movie studios had established music departments, and some of the greatest names in film music emerged during Hollywood's Golden Age, including Alfred Newman, Max Steiner, Dimitri Tiomkin, and Bernard Herrmann. Over the decades, other creators of screen music offered additional memorable scores, and some composers—such as Henry Mancini, Randy Newman, and John Williams—have become household names. The Encyclopedia of Film Composers features entries on more than 250 movie composers from around the world. It not only provides facts about these artists but also explains what makes each composer notable and discusses his or her music in detail. Each entry includes Biographical material Important dates Career highlights Analysis of the composer's musical style Complete list of movie credits This book brings recognition to the many men and women who have written music for movies over the past one hundred years. In addition to composers from the United States and Great Britain, artists from dozens of other countries are also represented. A rich resource of movie music history, The Encyclopedia of Film Composers will be of interest to fans of cinema in general as well as those who want to learn more about the many talented individuals who have created memorable scores. The objective is to provide the latest developments in the area of soft computing. These are the cutting edge technologies that have immense application in various fields. All the papers will undergo the peer review process to maintain the quality of work. This book constitutes the refereed proceedings of the 4th International Conference on Computational Intelligence, Communications, and Business Analytics, CICBA 2022, held in Silchar, India, in January 2022. The 21 full papers and 13 short papers presented in this volume were carefully reviewed and selected from 107 submissions. The papers are organized in topical sections on computational intelligence; computational intelligence in communication; and computational intelligence in analytics.
