The Nurses Apr 17 2021 A New York Times bestseller. "A funny, intimate, and often jaw-dropping account of life behind the scenes."—People *Nurses* is the compelling story of the year in the life of four nurses, and the drama, unsung heroism, and unique sisterhood of nursing—one of the world's most important professions (nurses save lives every day), and one of the world's most dangerous, filled with violence, trauma, and PTSD. In following four nurses, Alexandra Robbins creates sympathetic characters while diving deep into their world of controlled chaos. It's a world of hazing—"nurses eat their young." Sex—not exactly like on TV, but surprising just the same. Drug abuse—disproportionately a problem among the best and the brightest, and a constant temptation. And bullying—by peers, by patients, by hospital bureaucrats, and especially by doctors, an epidemic described as lurking in the "shadowy, dark corners of our profession." The result is a page-turning, shocking look at our health-care system.

Patient Handling Safety for Nursing Staff Aug 02 2022 The effectiveness of video scoring and feedback about the scoring of the components of safe patient transfers was observed among eight nursing staff members in a skilled nursing department within an acute care hospital. An ABCA (and sometimes ABCDA), multiple baseline across individuals design was utilized in the study. The dependent variable under investigation was the percentage of safe lifting components. Following baseline measures, nursing staff participated in an information phase during which they reviewed and discussed components of safe patient

transfers. A video scoring phase was introduced, during which, participants viewed and scored a model video of a patient transfer. Video scoring was not as effective in improving the safety of patient transfers for two of the participants during the video scoring phase as it had been for the other participants and a feedback phase was added for these two participants. Finally, a withdrawal phase was implemented for six participants to determine the long-term effects of the study. The current study suggests that video scoring and feedback are effective in increasing the safe behaviors related to patient transfers and reducing the possibility of back injuries among health care workers in a skilled nursing facility.
