Public health is of concern to practicing chiropractors, as well as chiropractic students. The vast majority of chiropractors utilize public health concepts every day as an integral part of patient care. For instance, they give advice on risk factors that should be avoided and protective factors to be added by their patients to enhance healing and prevent illness. Public health is also part of the curriculum at all chiropractic colleges and is tested by the National Board. No public health textbooks are available that are specifically designed for the chiropractor. Consequently, college instructors are forced to make-do with class notes and generic texts that do not address the specific issues relevant to chiropractic. This book will not only be of interest to chiropractic students, but also practicing chiropractors because it will provide information they can utilize to provide better care by positively intervening with their patients and their communities regarding public health matters. Chiropractic Peace marks the beginning of the end for infighting between mixers (broad-scope) and straights (focused-scope). The three refreshing essays by Drs. Reed Phillips, Ashley Cleveland, and Gerry Clum introduce chiropractic leaders, students, faculty and practitioners to a new, less contentious, dialogue on the political, sociological, philosophical and historical issues of our profession. After years of polemical argumentation, reading Chiropractic Peace is like getting a new pair of glasses or a much-needed spinal adjustment. Uplifting relief! Instead of seeking peace by trying to hammer out compromises, which many do not find successful in the end, the three writers utilize the concept of pluralism to construct a big tent which will accommodate all ethical chiropractors who adhere to basic chiropractic principles. The three contributors bring a much-needed respectful tone to the discourse. And in an important turn for the profession, each writer acknowledges that all of the camps focused-scope, middle-scope, and broad-scope are committed to ethical and skillful practice. The emphasis is on the practical application of palpation skills for the spine, pelvis and extremity joints, showing the student how to approach and learn the skill of static and dynamic joint play palpation and review the underlying anatomical structures. The illustrations indicate clearly how to locate important anatomical landmarks relevant to manual therapy practice and how to interpret the palpation findings." -- back cover. Changing student profiles and the increasing availability of mainstream and specialized learning technologies are stretching the traditional face-to-face models of teaching and learning in higher education. Institutions, too, are facing far-reaching systemic changes which are placing strains on existing resources and physical infrastructure and calling into question traditional ways of teaching through lectures and tutorials. And, with an ever-increasing scrutiny on teaching and teachers' accountability for positive educational outcomes, the call for closer attention to learning, teaching and, most especially, to the design and delivery of the curriculum is given increasing relevance and importance. Research provides strong evidence of the potential for technologies to facilitate not only cognition and learning but also to become integral components in the redesign of current curriculum models. Some Universities and individual academics have moved along this pathway, developing new and innovative curriculum, blending pedagogies and technologies to suit their circumstances. Yet, there are others, unsure of the possibilities, the opportunities and constraints in these changing times. Curriculum Models for the 21st Century gives insights into how teaching and learning can be done differently. The focus is on a whole of curriculum approach, looking at theoretical models and examples of practice which capitalize on the potential of technologies to deliver variations and alternatives to the more traditional lecture-based model of University teaching.?
