The Political Power of Business Apr 08 2021 Investigates to what extent business can get what it wants politically as firms and trade associations have a better understanding of the likely effects of policy than politicians and because their decisions partly determine these effects.

Change of State Mar 19 2022 How control over information creation, processing, flows, and use has become the most effective form of power: theoretical foundations and empirical examples of information policy in the U.S., an innovator informational state. As the informational state replaces the bureaucratic welfare state, control over information creation, processing, flows, and use has become the most effective form of power. In *Change of State* Sandra Braman examines the theoretical and practical ramifications of this "change of state." She looks at the ways in which governments are deliberate, explicit, and consistent in their use of information policy to exercise power, exploring not only such familiar topics as intellectual property rights and privacy but also areas in which policy is highly effective but little understood. Such lesser-known issues include hybrid citizenship, the use of "functionally equivalent borders" internally to allow exceptions to U.S. law, research

funding, census methods, and network interconnection. Trends in information policy, argues Braman, both manifest and trigger change in the nature of governance itself. After laying the theoretical, conceptual, and historical foundations for understanding the informational state, Braman examines 20 information policy principles found in the U.S Constitution. She then explores the effects of U.S. information policy on the identity, structure, borders, and change processes of the state itself and on the individuals, communities, and organizations that make up the state. Looking across the breadth of the legal system, she presents current law as well as trends in and consequences of several information policy issues in each category affected. Change of State introduces information policy on two levels, coupling discussions of specific contemporary problems with more abstract analysis drawing on social theory and empirical research as well as law. Most important, the book provides a way of understanding how information policy brings about the fundamental social changes that come with the transformation to the informational state.

Wireless Information and Power Transfer Apr 27 2020 em style="mso-bidi-font-style: normal;" Wireless Information and Power Transfer offers an authoritative and comprehensive guide to the theory, models, techniques, implementation and application of wireless information and power transfer (WIPT) in energy-constrained wireless communication networks. With contributions from an international panel of experts, this important resource covers the various aspects of WIPT systems such as, system modeling, physical layer techniques, resource allocation and performance analysis. The contributors also explore targeted research problems typically encountered when designing WIPT systems.

Information is Wealth Jan 17 2022 "This book is Information Gathering, First Stage of Hacking is Gathering Information. For someone who can use data it's not information for him it's a weapon. Be hungry for information not for food. The entire world works on this data And the data can enslave anybody. It can destroy anyone. Every Hacker need information about victim without information he can't do anything So spending every second on your time gathering information. A philosopher once said that one who shapes him according to nature survives. Technology wise update yourself Information is wealth. The is purpose of the citizens of the citizens who like to play the most effective role in the creation of wealthy community. "

Harnessing Information Power Dec 16 2021 Information technology offers the potential for quite different ways of organization and management control, yet the technology is often way ahead of managers ability to imagine the strategic consequences and appreciate the organizational and societal implications. This book intends to close that gap; written for business school students and managers, it explores and critically evaluates information needs and the potential of information systems.

Information Operations Mar 07 2021 Explains the critical importance of information operations in future conflict

Information Power Nov 27 2022 Since its publication in June 1998, Information Power has become the most talked about book in the school library world!

The Power of Knowledge Oct 26 2022 A thought-provoking analysis of how the acquisition and utilization of information has determined the course of history over the past five centuries and shaped the world as we know it todaydiv /DIV

Power, Information and War Jun 29 2020 Caldwell focuses primarily on the application of information in the political-military issue area, although many of the findings are relevant to other issue areas as well. The article has four central objectives: to demonstrate that information is a vital element of power; to review several historical cases of the strategic use of information; to describe the contemporary information

revolution and the capabilities that it makes available to decision makers; and to suggest ways in which decision makers can take advantage of information in order to maximize individual, corporate and/or national power. .

Solar Thermal Electric Power Information User Study Feb 24 2020 This report describes the results of a series of telephone interviews with groups of users of information on solar thermal electric power. These results, part of a larger study on many different solar technologies, identify types of information each group needed and the best ways to get information to each group. The report is one of ten discussing study results. Results from five solar thermal electric power groups of respondents are analyzed in this report: DOE-funded researchers, non-DOE-funded researchers, representatives of utilities, electric power engineers, and educators.

Knowledge Is Power Feb 18 2022 Brown here explores America's first communications revolution--the revolution that made printed goods and public oratory widely available and, by means of the steamboat, railroad and telegraph, sharply accelerated the pace at which information travelled. He describes the day-to-day experiences of dozens of men and women, and in the process illuminates the social dimensions of this profound, far-reaching transformation. Brown begins in Massachusetts and Virginia in the early 18th century, when public information was the precious possession of the wealthy, learned, and powerful, who used it to reinforce political order and cultural unity. Employing diaries and letters to trace how information moved through society during seven generations, he explains that by the Civil War era, cultural unity had become a thing of the past. Assisted by advanced technology and an expanding economy, Americans had created a pluralistic information marketplace in which all forms of public communication--print, oratory, and public meetings--were competing for the attention of free men and women. Knowledge is Power provides fresh insights into the foundations of American pluralism and deepens our perspective on the character of public communications in the United States.

Defining Information Power Jan 25 2020

Knowledge and Power Dec 28 2022 Ronald Reagan's most-quoted living author—George Gilder—is back with an all-new paradigm-shifting theory of capitalism that will upturn conventional wisdom, just when our economy desperately needs a new direction. America's struggling economy needs a better philosophy than the college student's lament: "I can't be out of money, I still have checks in my checkbook!" We've tried a government spending spree, and we've learned it doesn't work. Now is the time to rededicate our country to the pursuit of free market capitalism, before we're buried under a mound of debt and unfunded entitlements. But how do we navigate between government spending that's too big to sustain and financial institutions that are "too big to fail?" In Knowledge and Power, George Gilder proposes a bold new theory on how capitalism produces wealth and how our economy can regain its vitality and its growth. Gilder breaks away from the supply-side model of economics to present a new economic paradigm: the epic conflict between the knowledge of entrepreneurs on one side, and the blunt power of government on the other. The knowledge of entrepreneurs, and their freedom to share and use that knowledge, are the sparks that light up the economy and set its gears in motion. The power of government to regulate, stifle, manipulate, subsidize or suppress knowledge and ideas is the inertia that slows those gears down, or keeps them from turning at all. One of the twentieth century's defining economic minds has returned with a new philosophy to carry us into the twenty-first. Knowledge and Power is a must-read for fiscal conservatives, business owners, CEOs, investors, and anyone interested in propelling America's economy to future success.

Information Theory Meets Power Laws Sep 01 2020 Discover new theoretical connections between stochastic phenomena and the structure

of natural language with this powerful volume! *Information Theory Meets Power Laws: Stochastic Processes and Language Models* presents readers with a novel subtype of a probabilistic approach to language, which is based on statistical laws of texts and their analysis by means of information theory. The distinguished author insightfully and rigorously examines the linguistic and mathematical subject matter while eschewing needlessly abstract and superfluous constructions. The book begins with a less formal treatment of its subjects in the first chapter, introducing its concepts to readers without mathematical training and allowing those unfamiliar with linguistics to learn the book's motivations. Despite its inherent complexity, *Information Theory Meets Power Laws: Stochastic Processes and Language Models* is a surprisingly approachable treatment of idealized mathematical models of human language. The author succeeds in developing some of the theory underlying fundamental stochastic and semantic phenomena, like strong nonergodicity, in a way that has not previously been seriously attempted. In doing so, he covers topics including: Zipf's and Herdan's laws for natural language Power laws for information, repetitions, and correlations Markov, finite-state, and Santa Fe processes Bayesian and frequentist interpretations of probability Ergodic decomposition, Kolmogorov complexity, and universal coding Theorems about facts and words Information measures for fields Rényi entropies, recurrence times, and subword complexity Asymptotically mean stationary processes Written primarily for mathematics graduate students and professionals interested in information theory or discrete stochastic processes, *Information Theory Meets Power Laws: Stochastic Processes and Language Models* also belongs on the bookshelves of doctoral students and researchers in artificial intelligence, computational and quantitative linguistics as well as physics of complex systems.

The Power of Information Networks Aug 24 2022 The news media have significant influence on the formation of public opinion. Called the agenda-setting role of the media, this influence occurs at three levels. Focusing public attention on a select few issues or other topics at any moment is level one. Emphasizing specific attributes of those issues or topics is level two. *The Power of Information Networks: The Third Level of Agenda Setting* introduces the newest perspective on this influence. While levels one and two are concerned with the salience of discrete individual elements, the third level offers a more comprehensive and nuanced perspective to explain media effects in this evolving media landscape: the ability of the news media to determine how the public associates the various elements in these media messages to create an integrated picture of public affairs. This is the first book to detail the theoretical foundations, methodological approaches, and international empirical evidence for this new perspective. Cutting-edge communication analytics such as network analysis, Big Data and data visualization techniques are used to examine these third-level effects. Diverse applications of the theory are documented in political communication, public relations, health communication, and social media research. *The Power of Information Networks* will interest scholars, students and practitioners concerned with the media and their social and cultural effects.

The Power of Information Apr 20 2022

Queen of the Oil Club Jul 31 2020 This is the story of a gutsy journalist who challenged power-and succeeded. Wanda Jablonski was an investigative reporter, publisher, and power broker who came to wield exceptional influence on twentieth-century geopolitics by shedding light on the secretive world of oil from the 1950s through the 1980s. Jablonski unveiled many mysteries of the oil club, an elite group of Western executives who once controlled the international petroleum business. Nicknamed the midwife of OPEC, Jablonski undermined Big Oil's dominance by exposing the vulnerabilities of the major oil companies and encouraging the rise of oil nationalism. Her scoops,

commentaries, and private networking helped shape the debate that led to the creation of OPEC, the oil shocks of the 1970s, and the largest transfer of wealth in history. Tenacious and glamorous, Wanda-as she was known in the oil world-coaxed her way into exploration sites in Middle Eastern deserts, drilling camps in the Venezuelan jungle, male-only boardrooms in New York and London, and the king's harem in Saudi Arabia. She survived threats, boycotts, and suspicions of espionage as she elicited information and insight from CEOs of the oil giants and political leaders, including the shah of Iran. Working for the Journal of Commerce and other New York publications, Jablonski defied the prevailing view that a woman reporting on business had no credibility. In 1961, divorced and suddenly jobless, she took a big gamble by starting her own newsletter, Petroleum Intelligence Weekly, which was soon dubbed the "bible" of the oil world. Today, when conflict in the Middle East and climate change cause us to reexamine our reliance on oil, Jablonski's prescience-whether about oil dependency, cultural insensitivity, or market manipulation-proves remarkable. Anna Rubino, who reported for Jablonski in the 1980s, uses scores of interviews, exclusive access to her private papers, and newly declassified information to tell the dramatic story of this journalistic pioneer and the power of information.

Digital Influence Mercenaries Oct 22 2019 "This book examines the rapidly growing industry of "digital influence mercenaries"-shady online marketing firms and entrepreneurs who use online technologies to exploit the uncertainties, fears, and biases of their targets to gain profit and power. Students, researchers, policymakers, and the general public need this book to help them make sense of how and why each of us is being manipulated, and what we can do about it"--

Digital Capital Feb 06 2021 This book describes and understands the many factors that influence a person's behavior towards digital technologies, and how that affects the person's potential to benefit from digital society. The ability to adapt to these new technological environments - and the extent to which an individual embraces them - has become critical to an individual's well-being and quality of life, the underlying assumption being that only by effectively engaging with digital technologies can the user accrue benefits from the experience. By introducing the concept "digital capital," which refers to the conditions that determine how people access, use, and engage with digital technology, Park examines how the digital ecosystem of the user lead to new forms of digital inequality. Using numerous empirical studies on internet users and non-users, as well as recommending small localized solutions to the big global problem, a critical and alternative perspective of the digital divide is provided.

The End of Intelligence Jan 05 2021 Using espionage as a test case, The End of Intelligence criticizes claims that the recent information revolution has weakened the state, revolutionized warfare, and changed the balance of power between states and non-state actors—and it assesses the potential for realizing any hopes we might have for reforming intelligence and espionage. Examining espionage, counterintelligence, and covert action, the book argues that, contrary to prevailing views, the information revolution is increasing the power of states relative to non-state actors and threatening privacy more than secrecy. Arguing that intelligence organizations may be taken as the paradigmatic organizations of the information age, author David Tucker shows the limits of information gathering and analysis even in these organizations, where failures at self-knowledge point to broader limits on human knowledge—even in our supposed age of transparency. He argues that, in this complex context, both intuitive judgment and morality remain as important as ever and undervalued by those arguing for the transformative effects of information. This book will challenge what we think we know about the power of information and the state, and

about the likely twenty-first century fate of secrecy and privacy.

Care, Power, Information May 21 2022 This book is a critique and provincialization of Western social science and Global Northern academia, by the author of *The Digital Coloniality of Power*. It exposes shared colonial and extractive rationalities and histories of research, higher education, digitalization, and bioeconomy while proposing in the idea of BluesCollarship, a sketch for an alternative culture of worlding and commoning knowledge work and for making care matter in research and higher education. In a discourse analysis and provincialization of research and higher education, a tradition of elitist White-Collaredness in academia and in the social sciences, in particular, is criticized, and an alternative attitude towards the production, transfer, and use of knowledge – BluesCollarship – is proposed. The latter is rooted in a different idea of what "infrastructure" is, and in practices of decoloniality. Noting the current political climate of propaganda and populism, the persistence of social inequalities as well as of racism and misogyny, it is proposed that how people give warrant for knowledge claims should be reviewed under different terms. A coherent theme is that there is a genealogical root for current neo-extractive and neo-colonial rationalities in the Athenian idea of *oikos*, which conflates family, household, and property. In taking a distinctly writerly approach – rather than giving ready-made answers – the book aims at permanently provoking readers at every turn to think further, as well as before-and-beyond what is written, but to do so in thinking together with Others. Thus the book addresses scholars and students from across the social sciences who seek challenges to established ways of thinking in academia without simply replacing one canon for another. This book is for those who think of themselves as knowledge and culture laborers in this age of precarization, who seek to replace the university and cognitive capitalism with a pluriversity and an infrastructure built on knowledge and culture as fundamental values.

Global Political Economy in the Information Age Aug 20 2019 Introduction: 20th-21st century imaginings and realities Section 1: Time/Space Frameworks 1. States and Markets: understanding geospatial time 2. Virtual Realities: exploring sociospatiality 3. The Political Economy of Time: historical time, speed and mobility Section 2: Borders and Inequality 4. Transcendence and Communication 5. Inequality as Driver 6. Embedding Patriarchy: feminism and inequality in the Internet era Section 3: Technofutures and Power 7. Complex Hegemony in the 21st Century: power and inequality Conclusion

Information, Technology and Control in a Changing World Sep 20 2019 This book explores the interconnected ways in which the control of knowledge has become central to the exercise of political, economic, and social power. Building on the work of International Political Economy scholar Susan Strange, this multidisciplinary volume features experts from political science, anthropology, law, criminology, women's and gender studies, and Science and Technology Studies, who consider how the control of knowledge is shaping our everyday lives. From "weaponised copyright" as a censorship tool, to the battle over control of the internet's "guts," to the effects of state surveillance at the Mexico–U.S. border, this book offers a coherent way to understand the nature of power in the twenty-first century.

New Power Oct 02 2020 From two influential and visionary thinkers comes a big idea that is changing the way movements catch fire and ideas spread in our highly connected world. For the vast majority of human history, power has been held by the few. "Old power" is closed, inaccessible, and leader-driven. Once gained, it is jealously guarded, and the powerful spend it carefully, like currency. But the technological revolution of the past two decades has made possible a new form of power, one that operates differently, like a current. "New power" is made by many; it is open, participatory, often leaderless, and peer-driven. Like water or electricity, it is most forceful when it surges. The goal with

new power is not to hoard it, but to channel it. New power is behind the rise of participatory communities like Facebook and YouTube, sharing services like Uber and Airbnb, and rapid-fire social movements like Brexit and #BlackLivesMatter. It explains the unlikely success of Barack Obama's 2008 campaign and the unlikelier victory of Donald Trump in 2016. And it gives ISIS its power to propagate its brand and distribute its violence. Even old power institutions like the Papacy, NASA, and LEGO have tapped into the strength of the crowd to stage improbable reinventions. In *New Power*, the business leaders/social visionaries Jeremy Heimans and Henry Timms provide the tools for using new power to successfully spread an idea or lead a movement in the twenty-first century. Drawing on examples from business, politics, and social justice, they explain the new world we live in--a world where connectivity has made change shocking and swift and a world in which everyone expects to participate.

Information Theory Meets Power Laws May 29 2020 Discover new theoretical connections between stochastic phenomena and the structure of natural language with this powerful volume! *Information Theory Meets Power Laws: Stochastic Processes and Language Models* presents readers with a novel subtype of a probabilistic approach to language, which is based on statistical laws of texts and their analysis by means of information theory. The distinguished author insightfully and rigorously examines the linguistic and mathematical subject matter while eschewing needlessly abstract and superfluous constructions. The book begins with a less formal treatment of its subjects in the first chapter, introducing its concepts to readers without mathematical training and allowing those unfamiliar with linguistics to learn the book's motivations. Despite its inherent complexity, *Information Theory Meets Power Laws: Stochastic Processes and Language Models* is a surprisingly approachable treatment of idealized mathematical models of human language. The author succeeds in developing some of the theory underlying fundamental stochastic and semantic phenomena, like strong nonergodicity, in a way that has not previously been seriously attempted. In doing so, he covers topics including: Zipf's and Herdan's laws for natural language Power laws for information, repetitions, and correlations Markov, finite-state, and Santa Fe processes Bayesian and frequentist interpretations of probability Ergodic decomposition, Kolmogorov complexity, and universal coding Theorems about facts and words Information measures for fields Rényi entropies, recurrence times, and subword complexity Asymptotically mean stationary processes Written primarily for mathematics graduate students and professionals interested in information theory or discrete stochastic processes, *Information Theory Meets Power Laws: Stochastic Processes and Language Models* also belongs on the bookshelves of doctoral students and researchers in artificial intelligence, computational and quantitative linguistics as well as physics of complex systems.

Information Technology and Military Power Jun 22 2022 Militaries with state-of-the-art information technology sometimes bog down in confusing conflicts. To understand why, it is important to understand the micro-foundations of military power in the information age, and this is exactly what Jon R. Lindsay's *Information Technology and Military Power* gives us. As Lindsay shows, digital systems now mediate almost every effort to gather, store, display, analyze, and communicate information in military organizations. He highlights how personnel now struggle with their own information systems as much as with the enemy. Throughout this foray into networked technology in military operations, we see how information practice—the ways in which practitioners use technology in actual operations—shapes the effectiveness of military performance. The quality of information practice depends on the interaction between strategic problems and organizational solutions. *Information Technology and Military Power* explores information practice through a series of detailed historical cases and ethnographic

studies of military organizations at war. Lindsay explains why the US military, despite all its technological advantages, has struggled for so long in unconventional conflicts against weaker adversaries. This same perspective suggests that the US retains important advantages against advanced competitors like China that are less prepared to cope with the complexity of information systems in wartime. Lindsay argues convincingly that a better understanding of how personnel actually use technology can inform the design of command and control, improve the net assessment of military power, and promote reforms to improve military performance. Warfighting problems and technical solutions keep on changing, but information practice is always stuck in between.

Information Power Nov 15 2021 Identifies the purpose of the library media program

Information and American Democracy Aug 12 2021 This book assesses the consequences of new information technologies for American democracy in a way that is theoretical and also historically grounded. The author argues that new technologies have produced the fourth in a series of 'information revolutions' in the US, stretching back to the founding. Each of these, he argues, led to important structural changes in politics. After re-interpreting historical American political development from the perspective of evolving characteristics of information and political communications, the author evaluates effects of the Internet and related new media. The analysis shows that the use of new technologies is contributing to 'post-bureaucratic' political organization and fundamental changes in the structure of political interests. The author's conclusions tie together scholarship on parties, interest groups, bureaucracy, collective action, and political behavior with new theory and evidence about politics in the information age.

Capitalism, Power and Innovation Nov 03 2020 In contemporary global capitalism, the most powerful corporations are innovation or intellectual monopolies. The book's unique perspective focuses on how private ownership and control of knowledge and data have become a major source of rent and power. The author explains how at the one pole, these corporations concentrate income, property and power in the United States, China, and in a handful of intellectual monopolies, particularly from digital and pharmaceutical industries, while at the other pole developing countries are left further behind. The book includes detailed empirical mappings of how intellectual monopolies develop and transform knowledge from universities and open-source collaborations into intangible assets. The result is a strategy that combines undermining the commons through privatization with harvesting from the same commons. The book ends with provoking reflections to tilt the scale against intellectual monopoly capitalism and arguing that desired changes require democratic mobilization of workers and citizens at large. This book represents one of the first attempts to capture the contours of an emerging new era where old perspectives lead us astray, and the old policy toolbox is hopelessly inadequate. This is true for the idea that the best, or only, way to promote innovation is to transform knowledge into private property. It is also true for anti-trust policies focusing exclusively on consumer prices. The formation of global infrastructures that lead to natural monopolies calls for public rather than private ownership. Scholars and professionals from the social sciences and humanities (in particular economics, sociology, political science, geography, educational science and science and technology studies) will enjoy a clear and all-embracing depiction of innovation dynamics in contemporary capitalism, with a particular focus on asymmetries between actors, regions and topics. In fact, its topical issue broadens the book's scope to those curious about how innovation networks shape our world.

Wireless Information and Power Transfer: A New Paradigm for Green Communications Dec 24 2019 This book presents breakthroughs

in the design of Wireless Energy Harvesting (WEH) networks. It bridges the gap between WEH through radio waves communications and power transfer, which have largely been designed separately. The authors present an overview of the RF-EHNs including system architecture and RF energy harvesting techniques and existing applications. They also cover the idea of WEH in novel discoveries of information, the theoretical bounds in WEH, wireless sensor networks, usage of modern channel coding together with WEH, energy efficient resource allocation mechanisms, distributed self-organized energy efficient designs, delay-energy trade-off, specific protocols for energy efficient communication designs, D2D communication and energy efficiency, cooperative wireless networks, and cognitive networks.

Information and Power in History Sep 25 2022 The relationship between information and power is a relevant subject for all times. Today's perceived 'information revolution' has caused information to become a separate object of study during the last two decades for several disciplines. As the contemporary perspective is dominant, information history as a discipline of its own has not yet crystallized. In bringing together studies around a new research agenda on the relationship between information and power across time and space, presenting various governance regimes, media, materials, and modes of communication, this book forces us to rethink the prospects and challenges for such a new discipline.

Power in the Global Information Age May 09 2021 One of the most brilliant and influential international relations scholars of his generation, Joseph S. Nye Jr. is one of the few academics to have served at the very highest levels of US government. This volume collects together many of his key writings for the first time as well as new material, and an important concluding essay which examines the relevance of international relations in practical policymaking. This book addresses: * America's post-Cold War role in international affairs * the ethics of foreign policy * the information revolution * terrorism.

Power and Security in the Information Age Sep 13 2021 The marriage of computers and telecommunications, the global integration of these technologies and their availability at low cost is bringing about a fundamental transformation in the way humans communicate and interact. But however much consensus there may be on the growing importance of information technology today, agreement is far more elusive when it comes to pinning down the impact of this development on security issues. Written by scholars in international relations, this volume focuses on the role of the state in defending against cyber threats and in securing the information age. The manuscript is captivating with the significance and actuality of the issues discussed and the logical, knowledgeable and engaged presentation of the issues. The essays intrigue and provoke with a number of 'fresh' hypotheses, observations and suggestions, and they contribute to mapping the diverse layers, actors, approaches and policies of the cyber security realm.

The 48 Laws of Power Mar 27 2020 Amoral, cunning, ruthless, and instructive, this multi-million-copy New York Times bestseller is the definitive manual for anyone interested in gaining, observing, or defending against ultimate control – from the author of *The Laws of Human Nature*. In the book that *People* magazine proclaimed “beguiling” and “fascinating,” Robert Greene and Joost Elffers have distilled three thousand years of the history of power into 48 essential laws by drawing from the philosophies of Machiavelli, Sun Tzu, and Carl Von Clausewitz and also from the lives of figures ranging from Henry Kissinger to P.T. Barnum. Some laws teach the need for prudence (“Law 1: Never Outshine the Master”), others teach the value of confidence (“Law 28: Enter Action with Boldness”), and many recommend absolute self-preservation (“Law 15: Crush Your Enemy Totally”). Every law, though, has one thing in common: an interest in total domination. In a

bold and arresting two-color package, *The 48 Laws of Power* is ideal whether your aim is conquest, self-defense, or simply to understand the rules of the game.

Power, Information Technology, and International Relations Theory Jun 10 2021 American policy towards the internet has been the subject of popular debate, from the Iranian Green Revolution to Edward Snowden's revelations about Internet surveillance. This book examines the internet as a form of power in global politics, taking into account the significance of global material culture upon theories of international relations to reconsider how technology is understood as a form of social power. Examining American Internet policy as the product of the Open Door tradition in US foreign relations, McCarthy suggests that American policy officials actively promote the construction and maintenance of a network that maintains a 'free flow of information' in order to spread liberal democratic capitalism internationally. The book argues that technology is a form of institutional power that reflects the cultural values of its creators – in the case of the Internet, it reflects the cultural values of American liberal capitalism. Considered in this way, our theoretical conceptualization of technology and power is altered, pushing our analyses to consider the sociotechnical production of global order as the product of an uneven and combined global political economy. A unique and topical contribution to internet governance studies, this book will be a valuable resource to scholars of International Relations Theory, Global Politics and Technology Studies.

Access Controlled Jul 11 2021 Reports on a new generation of Internet controls that establish a new normative terrain in which surveillance and censorship are routine. Internet filtering, censorship of Web content, and online surveillance are increasing in scale, scope, and sophistication around the world, in democratic countries as well as in authoritarian states. The first generation of Internet controls consisted largely of building firewalls at key Internet gateways; China's famous "Great Firewall of China" is one of the first national Internet filtering systems. Today the new tools for Internet controls that are emerging go beyond mere denial of information. These new techniques, which aim to normalize (or even legalize) Internet control, include targeted viruses and the strategically timed deployment of distributed denial-of-service (DDoS) attacks, surveillance at key points of the Internet's infrastructure, take-down notices, stringent terms of usage policies, and national information shaping strategies. *Access Controlled* reports on this new normative terrain. The book, a project from the OpenNet Initiative (ONI), a collaboration of the Citizen Lab at the University of Toronto's Munk Centre for International Studies, Harvard's Berkman Center for Internet and Society, and the SecDev Group, offers six substantial chapters that analyze Internet control in both Western and Eastern Europe and a section of shorter regional reports and country profiles drawn from material gathered by the ONI around the world through a combination of technical interrogation and field research methods.

Regulating Power: The Economics of Electricity in the Information Age Jul 23 2022 Modern industrial society functions with the expectation that electricity will be available when required. By law, electric utilities have the obligation to provide electricity to customers in a "safe and adequate" manner. In exchange for this obligation, utilities are granted a monopoly right to provide electricity to customers within well-defined service territories. However, utilities are not unfettered in their monopoly power; public utility commissions regulate the relationship between a utility and its customers and limit profits to a "fair rate of return on invested capital." From its inception through the late 1970s, the electric utility industry's operational paradigm was to continue marketing electricity to customers and to build power plants to meet customer needs. This growth was facilitated by a U. S. energy policy predicated upon the assumption that sustained electric growth was

causally linked to social welfare (Lovins, 1977). The electric utility industry is now in transition from a vertically integrated monopoly to a more competitive market. Of the three primary components (generation, transmission, and distribution) of the traditional vertically integrated monopoly, generation is leading this transformation. The desired outcome is a more efficient market for the provision of electric service, ultimately resulting in lower costs to customers. This book focuses on impediments to this transformation. In partiCular, it argues that information control is a form of market power that inhibits the evolution of the market. The analysis is presented within the context of the transformation of the U. S.

Power and Influence Dec 04 2020 This book describes the management of information services and how successful management of information services is achieved. It emphasises the importance of building a base of support within the organisation which involves networking, strategic partnerships and personal relationships with those who are the organisation's key decision-makers.

Power, Information Technology, and International Relations Theory Oct 14 2021 This book examines the internet as a form of power in global politics. Focusing on the United States' internet foreign policy, McCarthy combines analyses of global material culture and international relation theory, to reconsider how technology is understood as a form of social power.
