Generational conflict has attracted considerable attention in the media and within academic circles during the past decade. At the center of this collection of papers analyzing various facets of that conflict lie complex issues of generational equity--issues that will remain important for the framing of public policy during the 1990s, What do the young and the middle-aged owe the elderly? In discharging that debt, to what extent are they able to provide for their own old age in a climate of changing notions of welfare? What light do the longer perspectives of history shed on these issues? What role do kinship, gender, and economic status play? The papers commissioned by Bengtson and Achenbaum are intended to give greater analytic rigor to current debates. The volume is interdisciplinary not only by theoretical intent but by the practical imperatives of gerontology. More than a dozen sociologists, economists, historians, demographers, and policy analysts discuss the meanings and ambiguities that are inherent in terms such as "generation," "equity," "compact," "contract," and "conflict," in order to assess how relations between the age groups seem to vary from one sociohistorical context to the next. This distinguished group of contributors raises

comparative issues throughout, assessing variations in generational ties by gender, race, class, and geographic location. Several project the extent to which recent changes in the political economy, public philosophy, and demographic structure of most "modern" societies presage greater conflicts, or greater consensus, in family members' relationships and social ties. Contract changes are a critical part of government contract management, with significant implications for all parties involved. *Managing Contract Changes* by Gregory Garrett provides important information, tools, and best practices that show you how to effectively deal with contract changes and avoid the pitfalls. Specifically, with *Managing Contract Changes*, you'll receive discussions on the following: The turbulent times we live in and how vital it is to properly and cost-effectively manage government contracts and the changes to those contracts Contract interpretation guidelines, which can be helpful in understanding contract requirements verses true contract changes A simple yet proven effective six-step contract changes management process, which can be used by U.S. government departments and agencies as well as government contractors to achieve success The unique and critical aspects of U.S. government contract changes, namely: the Federal Acquisition Regulation Changes Clause, Value Engineering Change Proposals, constructive changes, unauthorized commitments, and ratification. Negotiating, awarding, and implementing contract changes The contractor's right to seek/request an equitable adjustment for unilateral contract changes and the requirements for processing contract claims with the U.S. government

What actions can and should be taken by government contractors to mitigate the risk of litigation in contracts and contract changes and closeout and/or terminate contracts and related contract changes

Changes to the work on construction projects are a common cause of dispute. Such variations lead to thousands of claims in the UK every year and many more internationally. Liability for variations is not only relevant to claims for sums due for extra work but this is also an important underlying factor in many other construction disputes, such as delay, disruption, defects and project termination. This is the first book to deal exclusively with variations in construction contracts and provide the detailed and comprehensive coverage that it demands.

Construction Contract Variations analyses the issues that arise in determining whether certain work is a variation, the contractor's obligation to undertake such work as well as its right to be paid. It deals with the employer's power to vary and the extent of its duties to approve changes. The book also analyses the role of the consultant in the process and the valuation of variations. It reviews these topics by reference to a range of construction contracts. This is an essential guide for practitioners and industry professionals who advise on these issues and have a role in managing, directing and compensating change. Participants in the construction industry will find this book an invaluable guide, as will specialists and students of construction law, project management and quantity surveying. After being almost untouched for over 200 years, the contract law section of the French Civil Code was overhauled in 2016 and 2018. The New French

Law of Contract describes, explains and analyses the new general principles of contract law in the reformed Code in a concise and stimulating way. The areas covered include contract formation, validity, the interpretation and supplementation of terms, the regulation of unfair terms, privity of contract, change of circumstances, breach of contract and remedies. The book examines the ways in which the new articles affirm or depart from the provisions of the 1804 Code and pre-reform case law, giving special attention to changes that have proved to be controversial and the debates that surround them. It also considers the various influences that have shaped the reforms, in particular those from international contract law instruments such as the Principle of European Contract Law and the UNIDROIT Principles. Written from the standpoint of a common lawyer, the book is designed to help readers from a common law background to navigate the innovations in the reforms and the new French law of contract that emerges. It is essential reading for students, researchers, practitioners, law-makers and judges with an interest in comparative law. The world of work has undergone major changes in the last two decades. This book examines these changes in their international context. It is argued that collective bargaining should no longer be viewed as the most important means of regulating the employment relationship. In the changed world of work such an approach is becoming less relevant. Instead, other means of protecting legitimate worker interests are explored. These include: an adaptation and extension of the general principles of the law of contract; a constitutional right to fair labour practices; and the pursuit of good corporate governance and corporate social responsibility. The conclusion is that these alternative means of addressing legitimate worker interests can play a valuable role in filling the vacuum left by the worldwide decline of trade unions. This book examines how urban China is experiencing the shift from a planned to a market

economy. *Contract Changes* comparatively analyses the contract modification regulation of 11 EU Member States, drawing on case law and common legal practice. As the first comparative study of material contract modifications, this book explores the interpretation of key concepts such as: unforeseen circumstances, non-equivocal clauses and the overall nature of the contract. Highlighting the discord between the transparency of the award of a public contract and the transparency of its implementation, the book interprets the execution phase of procurement contracts as the dark side of public procurement. Considering unforeseen circumstances, the change of the identity of the contractor, non-compliance and remedies, this book provides a unique insight into the challenges of interpretation and application of contract modification rules. It concludes that, whilst the flexibility to make contract amendments is required in some circumstances, the grounding principles of public procurement law must be considered and applied in these instances. This original book will be of interest to researchers who are working in public procurement, European and comparative law. It will also be valuable to lawyers, contractors and policymakers involved with public procurement contracts, contracting authorities and advising private companies. Many building projects are the subject of claims - the assertion of a right, usually by the contractor, to an extension of the contract period or an additional payment under the terms of the building contract. Many of these claims are unsound or ill-founded, often because the basic principles are misunderstood. This highly regarded

book examines the legal basis of claims for extensions of time and additional payment, and what can and cannot be claimed under the main forms of contract. It includes chapters dealing with direct loss and expense, liquidated damages, extension of time, concurrency problems, acceleration, time at large, common law and contractual claims, global claims, and heads of claim and their substantiation. With the publication of the fifth edition, *Building Contract Claims* has been thoroughly revised to ensure it is fully up to date with the latest contracts, court judgments and building practice. Changes include: Coverage of over 60 additional relevant court cases Coverage of the 2005 JCT contracts suite Coverage of changes to the NEC contract Coverage of additional contracts such as *Constructing Excellence*; *Measured Term Contract* and the *ACA PPC2000* contract together with the 2005 relevant JCT sub-contracts Important changes to liquidated damages and to extensions of time, and the giving of notices Appendix 1 has been substantially revised Like its predecessors, the fifth edition of *Building Contract Claims* will be essential reading for architects, contract administrators, project managers and quantity surveyors, as well as contractors, contracts consultants and construction lawyers. In 2007-08, central government spent over £12 billion on service contracts, primarily in the areas of information and communication technology, facilities management and business process outsourcing, and an estimated £240 million on managing these contracts. In most cases central government monitors the performance of its suppliers, but it makes limited use of financial

incentives to encourage suppliers to improve performance and does not always apply financial penalties where suppliers under-performed. Testing of value for money of ongoing services and contract changes is variable. Planning and governance is one of the weaker areas of contract management. Less than half the organisations surveyed had an individual with overall responsibility for contract management, and there was no documented plan for managing 28 per cent of contracts. In addition, many contracts do not have in place some or all of the elements of good practice risk management. No commercial director/head of procurement rated the level of resources allocated to the management of their major contracts as 'good', and 22 per cent of contract managers considered they did not have time to perform their responsibilities well. Most contract managers had undertaken relevant training, although 60 per cent of organisations did not provide a structured training programme for their staff. The Office of Government Commerce is to issue further guidance on contract management in April 2009, building on the good practice framework it published jointly with the National Audit Office, and it is working to improve the provision of training on contract management. It is also extending its monitoring of major suppliers to government, and is reviewing recent examples of service failure where contractors failed to perform to identify lessons for the future. The organizational, social and psychological meanings of contracts, both written and unwritten, are the focus of this volume. The author addresses a number of important topics including contract making,

interpretation of contracts, contract violations, strategies for changing contracts and contracts evolving from circumstances relevant to the 1990s. In addition, a thought-provoking discussion of how contracts are linked to an organization's strategy and its human resource practices is included. The book concludes with an assessment of societal trends that point to large scale changes in future employment contracts. Recognizing this, Construction Contracts is a fully revised edition of the UK's leading textbook on the law governing this area. Brought up to date with recent cases and developments in the law as it stands at July 2000, this new edition: takes full account of the effects of the Housing Grants, Construction and Regeneration Act 1996, the Arbitration Act 1996, the Contracts (Rights of Third Parties) Act 1999 and the changes in the legal system brought about by the Woolf reforms includes extended coverage of financial protection, construction insurance and tendering controls, as well as the Construction (Design and Management) Regulations has been revised to take account of changes to the common standard-form contracts, particularly the New Engineering Contract and the GC/Works family of contracts. Retaining the same basic approach as its successful predecessors, this important text introduces the general principles that underlie contracts in construction, illustrating them by reference to the most important standard forms currently in use. Over the past few decades, significant changes have occurred across capital markets. Shareholder activists have become more prominent, institutional investors have begun to wield more power, and intermediaries like investment advisory firms have greatly increased their influence. These changes to the economic environment in which corporations operate have

outpaced changes in basic corporate law and left corporations uncertain of how to respond to the new dynamics and adhere to their fiduciary duties to stockholders. With *The Corporate Contract in Changing Times*, Steven Davidoff Solomon and Randall Stuart Thomas bring together leading corporate law scholars, judges, and lawyers from top corporate law firms to explore what needs to change and what has prevented reform thus far. Among the topics addressed are how the law could be adapted to the reality that activist hedge funds pose a more serious threat to corporations than the hostile takeovers and how statutory laws, such as the rules governing appraisal rights, could be reviewed in the wake of appraisal arbitrage. Together, the contributors surface promising paths forward for future corporate law and public policy. This master reference is essential if you contract with the government! From one of the leading policy experts of our time, an urgent rethinking of how we can better support each other to thrive Whether we realize it or not, all of us participate in the social contract every day through mutual obligations among our family, community, place of work, and fellow citizens. Caring for others, paying taxes, and benefiting from public services define the social contract that supports and binds us together as a society. Today, however, our social contract has been broken by changing gender roles, technology, new models of work, aging, and the perils of climate change. Minouche Shafik takes us through stages of life we all experience—raising children, getting educated, falling ill, working, growing old—and shows how a reordering of our societies is possible. Drawing on evidence and examples from around the world, she shows how every country can provide citizens with the basics to have a decent life and be able to contribute to society. But we owe each other more than this. A more generous and inclusive society would also share more risks collectively and ask everyone to contribute for as long as they can so that everyone can fulfill their potential. What

We Owe Each Other identifies the key elements of a better social contract that recognizes our interdependencies, supports and invests more in each other, and expects more of individuals in return. Powerful, hopeful, and thought-provoking, What We Owe Each Other provides practical solutions to current challenges and demonstrates how we can build a better society—together. In 1992, it was Bill Clinton's New Covenant. In 1994, it was the Republicans' Contract with America. In 1996, it is likely to be a whole new set of circumstances. Nonetheless, one theme will prevail: Citizens and their government distrust

one another, and it will take major changes on both sides to restore confidence in the relationship. *Broken Contract?* describes the elements of voter disaffection, party decline, mass mediation, social conflict, and government by referendum so prevalent in the politics of the 1990s. Original essays by leading scholars provide a unique perspective on what is happening today, how we arrived at this point, and what the future may hold if present trends continue. Highlights include innovative insights into the politics of disillusion along race, class, and gender lines; the "Perot people" of '92, where they went in '94 and will go in '96; and "talk-show democracy," from Larry King to Rush Limbaugh and the power of televangelism. *Broken Contract?* is a volume with a finger on the pulse of the temperament of the times. It demonstrates, in an engaging and accessible fashion, that the Contract with America is neither the first nor the last bargain to be struck with the American public in an effort to mend its broken trust.
