Venus and Mercury, and How to Observe Them Aug 02 2022
Venus and Mercury have long been regarded as difficult
targets for amateur observers, but advances in commercially-
made telescopes have brought them within the skills of
observers of only moderate experience. Peter Grego's
fascinating book presents an up-to-date, detailed
description of the history and geology of the so-called
inferior planets, and provides the latest, most useful
advice on observing and recording them with commercially-
available telescopes and cameras. The book also offers a
wealth of detailed practical information on every aspect of
observing, from safely targeting the two planets, through
visual observing, to sketching and electronic imaging.

A Wanted Man Jun 07 2020 #1 NEW YORK TIMES BESTSELLER •
THE BLOCKBUSTER JACK REACHER SERIES THAT INSPIRED TWO MAJOR
MOTION PICTURES AND THE STREAMING SERIES REACHER "The
indomitable Reacher burns up the pages."—USA Today Four
people in a car, hoping to make Chicago by morning. One man
driving, another telling stories that don't add up. A woman
in the back, silent and worried. And a hitchhiker with a
broken nose. An hour behind them, the FBI descends on an
old pumping station where a man was stabbed to death—the
knife work professional, the killers nowhere to be seen.
All Jack Reacher wanted was a ride to Virginia. All he did
was stick out his thumb. But he soon discovers he has
hitched more than a ride. He has tied himself to a massive
conspiracy, in which nothing is what it seems, and nobody
is telling the truth. "Furious action . . . [Lee] Child

keeps the pacing swift and the surprises rolling. . . . [A] feverishly thrilling series."—The Miami Herald "Smart, breathless . . . [with] one of the best female characters in the whole Reacher series."—The New York Times "Subtle and nuanced [with] seductive writing and irresistible plot twists."—Newsweek

Ground-water Quality Classification and Recommended Septic Tank Soil-absorption-system Density Maps, Castle Valley, Grand County, Utah May 07 2020 "This CD-ROM contains a 30 page report with 22 page appendix, and seven maps at 1:15,000 to 1:30,000 scale in easily readable PDF format that address ground-water quality in Castle Valley's valley-fill aquifer and provide recommendations for septic tank soil-absorption-system density based on potential water-quality degradation associated with use of these systems. The maps are described in detail in the report and show geology, valley-fill thickness, total-dissolved-solids concentration, nitrate concentration, ground-water quality class, potential containment sources, and recommended lot size."--Sticker on back of case.

The Rise of Islam and the Bengal Frontier, 1204-1760 Dec 26 2021 Eaton ranges over all the important aspects of that community's history, whether political and social, or cultural and religious...This study must rank among the finest contributions to South Asian scholarship to appear for some while.

Surface Winds of the Southeastern Tropical Atlantic Ocean (Classic Reprint) Apr 17 2021 Excerpt from Surface Winds of the Southeastern Tropical Atlantic Ocean Marsden square quadrants 0012 and 0011 and the northern halves of Marsden square quadrants 3012, 3011, 3002, and 3001 or about 10% of the Wind field's area during 40% of the year. In contrast to the small seasonal movement of the oceanic high pressure cells, the strong thermal reaction of the African continent causes its low pressure cell to move from a Northern Summer latitude of lat 25° N to its Southern

Summer latitude of 15° S. Through out the year, this low pressure cell affects surface winds of the area just offshore from Cape Palmas to Luanda. Over these coastal waters this strong low pressure cell changes the flow of the South Atlantic High from southeasterly to predominantly southerly and southwesterly. The west-east oriented area formed by Marsden square quadrants 3011, 3002, and 3001 has only a small seasonal change in wind speed. A comparison of the wind fields for February and August shows that this area has only a 0 to 5% change in frequency of Wind speed greater than 10 knots; the area of zero change is about one-half Marsden square quadrant in size and is centered over Marsden square quadrant 3002. In contrast, a sharp gradient of seasonal change in wind frequency occurs to the north and south, and (more steeply) to the northeastward towards Port Harcourt. Also centered over Marsden square quadrant 3002 is an area of convergence (Trewartha, 1968, p. 100, Fig. 10.10) which is about the size of one Marsden square quadrant. This area of convergence persists months after the larger ITCZ, earlier described, has moved northward out of the Wind field. Further study could possibly correlate other interface parameters with this coincident area of small change of convergence and frequency of Wind speed. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

The Faunas of Hayonim Cave, Israel Sep 22 2021 A decade of

zooarchaeological fieldwork went into Mary Stiner's pathbreaking analysis of changes in human ecology from the early Mousterian period through the end of Paleolithic cultures in the Levant. Stiner employs a comparative approach to understanding early human behavioral and environmental change, based on a detailed study of fourteen bone assemblages from Hayonim Cave and Meged Rockshelter in Israel's Galilee.

Cladh Hallan - Roundhouses and the dead in the Hebridean Bronze Age and Iron Age Nov 05 2022 This first of two volumes presents the archaeological evidence of a long sequence of settlement and funerary activity from the Beaker period (Early Bronze Age c. 2000 BC) to the Early Iron Age (c. 500 BC) at the unusually long-occupied site of Cladh Hallan on South Uist in the Western Isles of Scotland. Particular highlights of its sequence are a cremation burial ground and pyre site of the 18th–16th centuries BC and a row of three Late Bronze Age sunken-floored roundhouses constructed in the 10th century BC. Beneath these roundhouses, four inhumation graves contained skeletons, two of which were remains of composite collections of body parts with evidence for post-mortem soft tissue preservation prior to burial. They have proved to be the first evidence for mummification in Bronze Age Britain. Cladh Hallan's remarkable stratigraphic sequence, preserved in the machair sand of South Uist, includes a unique 500-year sequence of roundhouse life in Late Bronze Age and Iron Age Britain. One of the most important results of the excavation has come from intensive environmental and micro-debris sampling of house floors and outdoor areas to recover patterns of discard and to interpret the spatial use of 15 domestic interiors from the Late Bronze Age to the Early Iron Age. From Cladh Hallan's roundhouse floors we gain intimate insights into how daily life was organized within the house – where people cooked, ate, worked and slept. Such evidence rarely survives from prehistoric houses in Britain or Europe, and the results make a profound contribution to long-running debates about the sunwise organisation of roundhouse activities. Activity at

Cladh Hallan ended with the construction and abandonment of two unusual double-roundhouses in the Early Iron Age. One appears to have been a smokery and steam room, and the other was used for metalworking.

Power, Employment and Accumulation Feb 02 2020 This book provides an interesting and refreshing collection of economic research conducted in the broadly heterodox tradition. A variety of topical issues are addressed, including labor market inequalities, welfare reform, interest rate policies, international trade, and global financial instability. What unites these diverse essays is their common perspective that social institutions and structures "matter" to the performance of economies, and hence should receive more attention from economists. Conventional economic thought focuses unduly on the functioning of so-called "free-markets." The persistent influence of social structures, institutions and practices - and the unequal extent to which differing social constituencies are able to exert power through those structures - often receives short shrift in this traditional research. However, this volume makes a significant contribution by helping to reverse this trend. The chapters, all written by top economists from around North America, address a range of topical issues, utilizing a rich variety of methodological techniques from empirical investigations to game theory and opinion surveys. Furthermore, the book, which is dedicated to the memory of David M. Gordon, has as its unifying theme the incorporation of structural analysis into economic science - an important goal for academics and students alike.

Earth Treasures Jan 07 2023 Here at last, is the ultimate guidebook to actual locales that can be driven to for collecting rocks, minerals and fossils in Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee, Virginia, and West Virginia. The four volumes, with over 1,200 maps, describe over 5,000 specific sites; this Volume 2 includes over 300 to-scale maps marked with over 1,000 collecting sites and detailed directions on

getting there, the types of rocks, minerals and fossils to be found at each site, and how and where to search once you've arrived.

The Black Shoals Sep 30 2019 In *The Black Shoals* Tiffany Lethabo King uses the shoal—an offshore geologic formation that is neither land nor sea—as metaphor, mode of critique, and methodology to theorize the encounter between Black studies and Native studies. King conceptualizes the shoal as a space where Black and Native literary traditions, politics, theory, critique, and art meet in productive, shifting, and contentious ways. These interactions, which often foreground Black and Native discourses of conquest and critiques of humanism, offer alternative insights into understanding how slavery, anti-Blackness, and Indigenous genocide structure white supremacy. Among texts and topics, King examines eighteenth-century British mappings of humanness, Nativeness, and Blackness; Black feminist depictions of Black and Native erotics; Black fungibility as a critique of discourses of labor exploitation; and Black art that rewrites conceptions of the human. In outlining the convergences and disjunctions between Black and Native thought and aesthetics, King identifies the

potential to create new epistemologies, lines of critical inquiry, and creative practices.
