***Microeconomics Oct 27 2019 In this book, John P. Burkett presents microeconomics as an evolving science, interacting with mathematics, psychology, and other disciplines and offering solutions to a growing range of practical problems. The book shows how early contributors such as Xenophon, Ibn Khaldun, and David Hume posed the normative and positive questions central to microeconomics. It expounds constrained optimization techniques, as developed by economists and mathematicians from Daniel Bernoulli to Leonid Kantorovich, emphasizing their value in deriving norms of rational behavior and testable hypotheses about typical behavior. Applying these techniques, the book introduces partial equilibrium analysis of particular markets and general equilibrium analysis of market economies. The book both explains how laboratory and field experiments are used in testing economic hypotheses and provides materials for classroom experiments. It gives extensive and innovative coverage of recent findings in cognitive psychology***

***The Economics of Artificial Intelligence Dec 10 2020 Advances in artificial intelligence (AI) highlight the potential of this technology to affect productivity, growth, inequality, market power, innovation, and employment. This volume seeks to set the agenda for economic research on the impact of AI. It covers four broad themes: AI as a general purpose technology; the relationships between AI, growth, jobs, and inequality; regulatory responses to changes brought on by AI; and the effects of AI on the way economic research is conducted. These economic and political failures have contributed to the rise of extremist parties on the right. Marginalized populations are being made scapegoats for Europe's woes. But the problems of today's Europe stem from decisions based on a blind worship of markets in too many areas of policy. If Europe is to return to an innovative and dynamic economy—and if there is to be shared prosperity, social solidarity, and justice—then EU countries need to break with their current, destructive trajectory. This volume offers concrete strategies for renewal that would also reinvigorate the project of European integration, with fresh ideas in the areas of both macroeconomics and microeconomics, including central banking, public investment, corporate governance and competition policy, social policy, and international trade.***

***The Commanding Heights Nov 08 2020 The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, THE COMMANDING HEIGHTS shows how a revolution in ideas is transforming the world economy - why it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first century.***

***Fair Trade for All: How Trade Can Promote Development Oct 08 2020 Winner of the Nobel Prize in Economics and author of the New York Times bestselling book Globalization and Its Discontents,***

***Joseph E. Stiglitz here joins with fellow economist Andrew Charlton to offer a challenging and controversial argument about how globalization can actually help Third World countries to develop and prosper. In Fair Trade For All, Stiglitz and Charlton address one of the key issues facing world leaders today--how can the poorer countries of the world be helped to help themselves through freer, fairer trade? To answer this question, the authors put forward a radical and realistic new model for managing trading relationships between the richest and the poorest countries. Their approach is designed to open up markets in the interests of all nations and not just the most powerful economies, to ensure that trade promotes development, and to minimize the costs of adjustments. The book illuminates the reforms and principles upon which a successful settlement must be based. Vividly written, highly topical, and packed with insightful analyses, Fair Trade For All offers a radical new solution to the problems of world trade. It is a must read for anyone interested in globalization and development in the Third World.***

In the Balkans half a century later, a Serb from the war-blasted city of Vukovar defies his superiors in order to save the lives of Croats. At the height of the Second Intifada, a member of Israel's most elite military unit informs his commander he doesn't want to serve in the occupied territories. Fifty years after Hannah Arendt examined the dynamics of conformity in her seminal account of the Eichmann trial, Beautiful Souls explores the flipside of the banality of evil, mapping out what impels ordinary people to defy the sway of authority and convention. Through the dramatic stories of unlikely resisters who feel the flicker of conscience when thrust into morally compromising situations, Eyal Press shows that the boldest acts of dissent are often carried out not by radicals seeking to overthrow the system but by true believers who cling with unusual fierceness to their convictions. ***Models in Microeconomic Theory ('She' Edition) Nov 28 2019 Models in Microeconomic Theory covers basic models in current microeconomic theory. Part II (Chapters 8-14) introduces the concept of equilibrium, beginning, unconventionally, with the models of the jungle and an economy with indivisible goods, and continuing with models of an exchange economy, equilibrium with rational expectations, and an economy with asymmetric information. Part III (Chapters 15-16) provides an introduction to game theory, covering strategic and extensive games and the concepts of Nash equilibrium and subgame perfect equilibrium. Part IV (Chapters 17-20) gives a taste of the topics of mechanism design, matching, the axiomatic analysis of economic systems, and social choice. ***Money and Government Aug 06 2020 A critical examination of economics' past and future, and how it needs to change, by one of the most eminent political economists of our time The dominant view in economics is that money and government should play only minor roles in economic life. The view taken in this important new book is that the omnipresence of uncertainty makes money and government essential features of any market economy.
